RE: Data Scientist role at agap2 Spain

Dear hiring team,

At Blink SEO I defined and built a full ML platform from scratch. There was no existing system: I architected the Python backend on GCP, set up BigQuery to handle 50M+ data points daily, and created PostgreSQL job queues to orchestrate async workloads. The sklearn clustering and NLP features I built increased team productivity by 20x, and the platform eventually became a standalone SaaS product.

The role meant owning the full stack: data preparation, model development, infrastructure, deployment. I worked directly with the delivery team to understand what they needed, then built pipelines and dashboards they actually used. Continuous deployment based on feedback.

Since January 2025 I've been consulting, taking on projects across different clients and stacks: pipeline automation with dbt and Databricks, dashboards in Tableau, database setup in AWS. The variety suits me and I've gotten comfortable adapting quickly to new environments.

My PhD focused on time series forecasting: detecting tipping points in noisy systems using spectral analysis. The domain was geophysical but the statistical foundations transfer directly.

I'm based in Spain. Happy to discuss.

Yours faithfully,

Joshua Prettyman
