RE: Senior Data Scientist role at Clarity AI

Dear hiring team,

I've spent the last three years building production ML systems. At Blink SEO I built a platform that processed 50M+ data points daily: sklearn clustering for keyword grouping, text embeddings for semantic matching, HuggingFace integrations for content generation. The system ran on GCP with PostgreSQL job queues handling async workloads. It started as an internal tool and grew into Macaroni Software, a standalone SaaS product.

The sustainability focus is what drew me to Clarity AI. My MRes and PhD were part of the EPSRC Mathematics of Planet Earth programme, which trains researchers specifically for climate and environmental work. My PhD focused on tipping point detection in climate systems. I spent five years at the National Physical Laboratory analysing meteorological time series, published in Environmental Research Letters, and presented at international conferences.

I saw you're looking for someone who can work in a collaborative, scalable ML production environment. At Blink I worked closely with the delivery team to translate their workflows into automated pipelines and dashboards. The features that got built were the ones they actually used, which meant constant iteration based on feedback. That back-and-forth is where I do my best work.

I'm based in Spain and interested in remote or hybrid. Happy to discuss further.

Yours faithfully,

Joshua Prettyman
