RE: Data Scientist role at Tupl

Dear hiring team,

I am interested in applying for the Python Software Engineer position. Looking over the job description I'm confident this is a good fit.

In my last role at Blink SEO I was hired as a "Data Scientist" but started out by building the database and backend system from scratch, which wasn't exactly what I'd expected but it gave me great experience writing efficient python modules; serving our backend from a GCP Compute Engine instance (Debian); writing wrappers for web-based APIs; and working closely with the delivery team to understand their processes and how I could automate these. As the role progressed I added ML features into the software and built a user-friendly frontend in Retool as the software transitioned from an internal system to a SaaS app (Macaroni Software).

I really enjoy writing in great python code, expanding my knowledge of the language and its libraries.

Thank you for your consideration. I look forward to hearing from you and learning more about the specifics of this role.

Yours faithfully,

Joshua Prettyman
