RE: AI Machine Learning R&D Engineer role at Welocalize

Dear hiring team,

The ownership model at Welocalize appeals to me. At Blink SEO I built an NLP-powered ML platform from scratch: I conceived the architecture, wrote the Python backend, deployed to GCP, and iterated based on user feedback until it became a standalone SaaS product. That full cycle, from conception to production system handling 50M+ data points daily, is what I do best.

The NLP work I did at Blink included keyword clustering using NLTK and text embeddings, semantic matching via centroid similarity, and HuggingFace integrations for content generation. The application was SEO rather than localization, but the techniques overlap: processing text at scale, building embeddings, scoring quality, deploying models that run reliably. I've also done prompt engineering work and local LLM deployment with Ollama.

My PhD in Mathematics gave me foundations in statistical modeling and rigorous evaluation. I've published in peer-reviewed journals and presented at international conferences, so I'm comfortable communicating technical work to different audiences.

My cloud experience is primarily GCP (Compute Engine, BigQuery, Cloud Functions) rather than AWS, though I've worked with AWS in recent freelance projects and the skills transfer. I'm based in Spain and the flexible remote setup with core hours in CET works well for me.

Happy to discuss how my NLP and production ML experience fits what you're building.

Yours faithfully,

Joshua Prettyman
