RE: Data Science Consultant role at Management Solutions

Dear hiring team,

The consulting model at Management Solutions interests me: at Blink I built a platform from scratch that processed 50M+ data points daily. Python backend on GCP, sklearn for clustering and predictive models, PostgreSQL for async job queues. The work involved translating client needs into automated analytics. I'd meet with the delivery team, understand their workflows, then build pipelines and dashboards that actually got used. The system increased productivity by 20x and eventually became a SaaS product.

Since leaving Blink I've taken on freelance projects: model deployment, dashboard creation in Tableau, pipeline automation with dbt and Databricks. I enjoy the variety and the direct client relationships.

My PhD in Mathematics focused on time series analysis and tipping point detection: I used MATLAB for numerical simulations and published in peer-reviewed journals. That gave me strong foundations in statistical modeling, and presenting at international conferences taught me to communicate technical work clearly.

The exposure to high-profile projects and the partnership model both appeal to me.

I'm based in Málaga and available to talk.

Yours faithfully,

Joshua Prettyman
